Warehousing

DPP: 1

Q1 What is the primary purpose of a data warehouse ?
(A) Online Transaction Processing
(B) Data Analysis and Reporting
(C) Data Entry
(D) Internet Browsing

Q2 Which of the following is a characteristic of a data warehouse ?
(A) Volatile (B) Integrated
(C) Transactional (D) Real-time

Q3 Which of the following is not a component of the data warehousing architecture ?
(A) Data Source
(B) Data Staging
(C) Data Loading
(D) Data Normalization

Q4 What are measures in a data warehouse ?
(A) Attributes that describe the data
(B) Numerical data that can be aggregated
(C) Textual data for reports
(D) None of the above

Q5 Which of the following is an example of a measure ?
(A) Customer Name
(B) Sales Amount
(C) Product Category
(D) Store Location

Q6 What is data cleaning ?
(A) Process of summarizing data
(B) Process of removing inconsistencies and errors
(C) Process of organizing data
(D) Process of entering data

Q7 Which of the following techniques is used for data smoothing ?
(A) Regression
(B) Clustering
(C) Classification
(D) All of the above

Hints & Solutions

Q1 Text Solution:

(a) Incorrect: OLTP is not the primary function of a data warehouse.

(b) Correct: Data warehouses are designed for analysis and reporting.

(c) Incorrect: Data entry is not a primary purpose.

(d) Incorrect: Internet browsing is unrelated to data warehousing.

Q2 Text Solution:

(a) Incorrect: Data warehouses are non-volatile.

(b) Correct: Data warehouses integrate data from multiple sources.

(c) Incorrect: They are not designed for transactional processing.

(d) Incorrect: They are usually not real-time; data is periodically updated.

Q3 Text Solution:

(a) Incorrect: Data sources provide the data for the warehouse.

(b) Incorrect: Data staging involves preparing data for the warehouse.

(c) Incorrect: Data loading refers to the process of loading data into the warehouse.

(d) Correct: Data normalization is more related to OLTP databases.

Q4 Text Solution:

(a) Incorrect: Attributes that describe data are dimensions.

(b) Correct: Measures are numerical data that can be aggregated.

(c) Incorrect: Textual data are usually dimensions.

(d) Incorrect: Measures are essential in data warehousing.

Q5 Text Solution:

(a) Incorrect: Customer Name is a dimension.

(b) Correct: Sales Amount is a measure.

(c) Incorrect: Product Category is a dimension.

(d) Incorrect: Store Location is a dimension.

Q6 Text Solution:

(a) Incorrect: Summarizing data is not data cleaning.

(b) Correct: Data cleaning involves removing inconsistencies and errors.

(c) Incorrect: Organizing data is part of data management.

(d) Incorrect: Entering data is a separate process.

Q7 Text Solution:

(a) Correct: Regression is a technique used for data smoothing.

(b) Incorrect: Clustering is used for grouping data.

(c) Incorrect: Classification is used for categorizing data.

(d) Incorrect: Only regression is a smoothing technique.
