MCQ

One-fifth of the cost price, one-seventh of the marked price and one-sixth of the selling price are all equal. What is the gain or loss to the trader?

(A) 20% gain

(B) $16\frac{2}{3}$% loss

(C) $16\frac{2}{7}$% gain

(D) 10% loss

$\frac{1}{5}$ C.P = $\frac{1}{6}$ S.P

$\frac{S.P}{C.P} = \frac{6}{5} = 1.2$

20% P

MCQ

A shopkeeper buys toffees at rate of 40 for Rs. 5 and sells at rate of 50 for Rs. 10. The profit % is

(A) 60

(B) 50

(C) 25

(D) 30

$$C.P = \frac{5}{40} = \frac{1}{8}$$

$$S.P = \frac{10}{50} = \frac{1}{5}$$

$$\frac{S.P}{C.P} = \frac{1}{5} \times \frac{8}{1} = \frac{8}{5} = 1.6$$

MCQ

A shopkeeper had calculated profit % on SP and announced it as 40%. His actual profit % is

(A) 60

(B) 66.5

(C) 66.66

(D) 66.33

$SP = 100$

$P = 40$

$CP = 100 - 40 = 60$

$\frac{SP}{CP} = \frac{100}{60} = \frac{5}{3} = 1.\overline{6}$

66.66

66.6% P

MCQ

A radio was sold for 18% profit. If it were sold for Rs. 30 more a profit of 20% would have gained. Find the CP.

(A) 1000

(B) 1200

(C) 1500

(D) 1800

$\frac{SP}{CP} = 1.18$

$\Rightarrow SP = 1.18\,CP$ — (1)

$\frac{SP + 30}{CP} = 1.2$ — (2)

$1.18\,CP + 30 = 1.2\,CP$

$0.02\,CP = 30$

$CP = \frac{30}{0.02} = 1500$

$\boxed{1500}$

MCQ

A vendor sells lemons at 5 for a rupee gaining 40%. How many did he buy for a rupee?

$C.P = \frac{1}{x}$ $S.P = \frac{1}{5}$

(A) 7

(B) 12

(C) 6

(D) 8

$\frac{S.P}{C.P} = \frac{1}{5} \times \frac{x}{1} = 1.4$

$x = 7$

MCQ

Saleem lost 20% by selling a bicycle for ₹1536. What percent shall he gain by selling it for ₹2040?

(A) 10%

(B) 12.5%

(C) 9%

(D) 6.25%

$448 \to 6 \to 288$

$48 \to 2 \to 96$

$\frac{1536}{C.P} = 0.8$

$\frac{1536}{0.8} = C.P$

$C.P = 1920$

0.0625

$S.P = 2040$

$\frac{S.P}{C.P} = \frac{2040}{1920} = 1.0625$

$= 1.0625$

MCQ

A cloth merchant says that due to the slump in the market, he sells the cloth at 10% loss. But he uses a false meter scale and gains 20%. How much less he measures for a meter?

(A) 74 cm

(B) 75 cm

(C) 36 cm

(D) 25 cm

$$\frac{SP}{CP} = 0.9 \times \frac{100}{x} = 1.2$$

$$\Rightarrow \frac{90}{1.2} = x$$

$$\Rightarrow \frac{\cancel{900}^{225}}{\cancel{12}_{3}} = x$$

$$x = \frac{225}{3}$$

$$= 75$$

$$100 - 75 = 25\text{ cm}$$

MCQ

A fruit vendor buys 10 bananas for ₹14 and sells them at 12 for ₹15, the find his profit or loss percentage.

(A) 12.5% P

(B) 15% L

(C) 6.3% L

(D) 10.7% L

$C.P = \frac{14}{10} = 1.4 = \frac{7}{5}$

$S.P = \frac{15}{12} = \frac{5}{4}$

$\frac{S.P}{C.P} = \frac{5}{4} \times \frac{5}{7} = \frac{25}{28} = 0.892$

$\rightarrow 0.108$

10.8% loss

1.000
0.892
0.108

MCQ

100 apples are bought at ₹350 and sold at the rate of ₹48 per dozen. What is the profit% or loss%?

(A) 14.28% P

(B) 12.5% P

(C) 16.8% L

(D) No P no L

$C.P = \frac{350}{100} = 3.5$

$S.P = \frac{48}{12} = 4$

$\frac{S.P}{C.P} = \frac{4}{3.5} = \frac{40}{35} = \frac{8}{7} = 1.1428$

.1428

14.28% P

MCQ

How much percent above the cost price should a shopkeeper mark his goods so that after allowing a discount of 25% on the marked price, he gains 20%?

(A) 75%

(B) 60%

(C) 44%

(D) 50%

$M.P = \frac{\cancel{100}^{\cancel{24}\,8}}{\cancel{75}_{\cancel{15}\,5}} C.P$

$M.P = 1.6\, C.P$

$\frac{S.P}{C.P} = 1.2 \Rightarrow S.P = 1.2\, C.P$

$S.P = 0.75\, M.P$

$1.2\, C.P = 0.75\, M.P$

$\frac{1.2}{0.75} C.P = M.P$

Thank You!

GW Soldiers
